

Vietnam Plantation Forestry Challenges

Challenging terrain, steep slopes, mixed use land parcels

Very short rotation length, limiting production and revenue

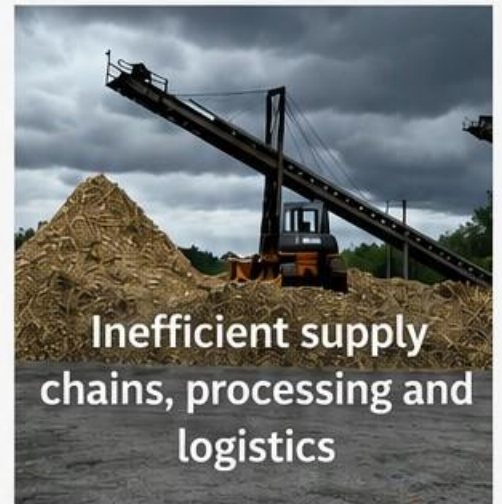

Limited capacity to produce high quality planting stock

High density, low input management reduces quality and volume

Mechanisation limited by terrain + high risk of erosion

Inefficient supply chains, processing and logistics

Reliant on low-cost seasonal labour for manual operations

Potential for mechanisation limited by terrain

Poor rural road network limits vehicle size and access to forest areas
